INTRODUCTION TO WEAPONS STORAGE

This brochure illustrates various solutions for storing common weapons in Rousseau drawers.

It remains the client's responsibility to ensure that storage complies with applicable safety standards for its intended use, as well as to validate dimensional compatibility between the weapons and our storage solutions.

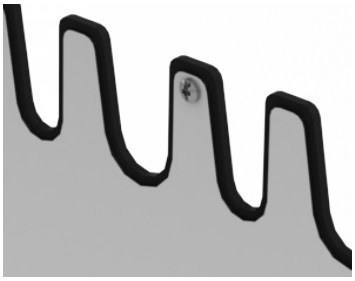
We recommend carefully verifying:

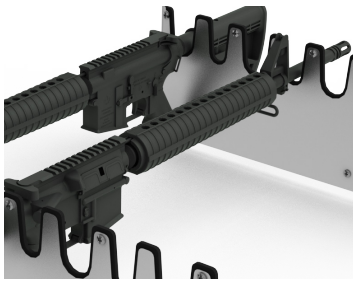
- The dimensions of the cutouts,
- The usable space inside the drawers,
- And any other relevant specifications.

NOTES: The dimensions shown are the only dimensions available.

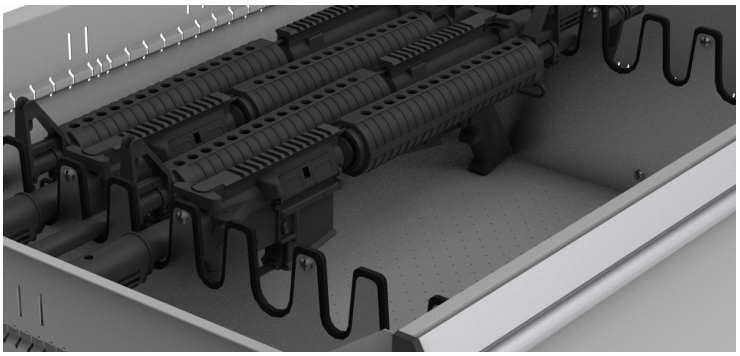
Compatible with most of the mentioned weapon types and other ones, refer to the dimensions indicated in the tables.

UNIQUE FEATURES FOR WEAPONS STORAGE

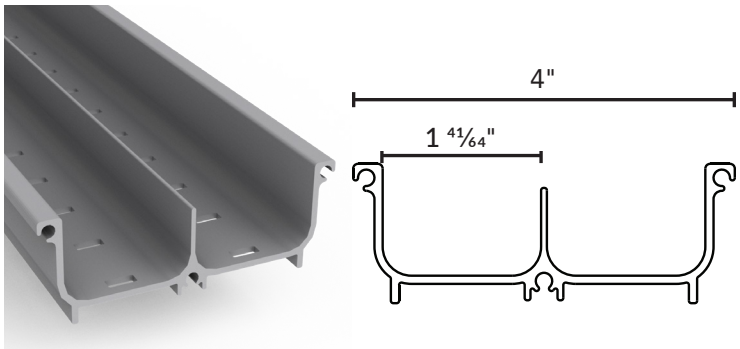




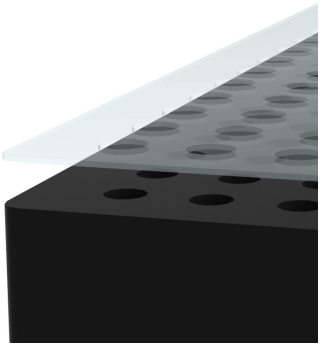
In accordance with defence and security regulations, two welded vertical security bars are included with the cabinet.

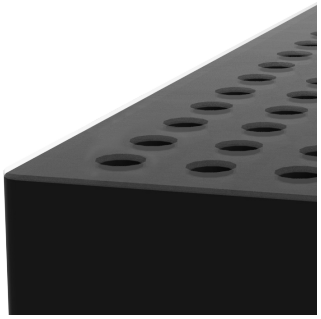


The cradles are composed of a rubber strip positioned between two steel sheets, allowing the weapon to be placed without causing damage.



The aluminum compartments allow for easy organization of items and can be further subdivided with plastic dividers.





The closed-cell foams and the transparent polycarbonate sheet facilitate the identification of items and help prevent foam damage during use.
