

❖ Commander Wire Shelves

✓ **Now in stock and available for immediate delivery to Commander Warehouse Equipment Ltd. Customers.**

❖ **Designed to work on E-Z-Rect Type 1 and Trim-Line shelving systems.**

✓ **Commander wire shelves work on “C” Channel and “V” style frame connector profiles.**

❖ **Commander Wire Shelves have a Superior Design and Construction to outperform the competition.**

✓ **Our tighter 1” x 4” grid pattern vs the typical competition shelf with 2” x 4” grid pattern provides strength and reduces bowing or dishing. In addition, products have better support under them, boxes cannot sink into the smaller grid openings, tags / labels have less chance to fall through the grid.**

- ✓ We provide six (6) double front to back support wires vs the typical competition shelf with three (3). This provides for increased rigidity, higher load capacity and resistance to deflection.

- ✓ The first double support wires on the Commander wire shelves are inset from the ends of the shelf so they will land on the frame connector flanges. This reduces sagging on the end of the shelf. The competition's first double wire is on the end of the shelf which does not engage the flange and provide any support.

- ✓ We do not have center double support wires so there is no interference with the optional front to back frame connector supports. Competitors have a center double support wire, so it creates a “teeter-totter” effect when a center support is used.

- ❖ Ours shelves come with a high-quality powder coat finish (light grey)
- ❖ The wire grid openings meet the 50% perforation requirement for fire codes.
- ❖ Nonstock sizes are available to order, prices on request.
- ❖ More competitive pricing for large quantities, please check with your Commander sales team representative.
- ❖ No charge samples can be provided.
